AMOK

Possessed with a murderous, violent, uncontrollable fury,
out of control robots are out to get you
SHOOT FIRST OR DIE!

AMOK

The robots in the space station have gone berserk and are running amok. They have killed the inhabitants, either by running them down or shooting them with their laser weapons. Your mission is to destroy these mad robots, and you have three lives in which to do this. You have been placed inside a room full of robots which you must destroy before they get you. You cannot leave the room by the way you entered, but there are three other exits which lead to other rooms. Use these exits if you need to escape, or if you have destroyed all the robots in your room. You have a choice of weapons, your VIC keyboard or your joystick. If you are using the keyboard Press

U to move up
N to move down
H to move left
J to move right

and Shift to fire.

You can only fire when running and in the direction of movement. If you have a joystick you can move and fire diagonally.

You may set your skill before starting each mission at any level from 1 (novice) to 9 (expert) by pressing function key 1 (f1) until the desired level is displayed (at top left of screen).

To start each mission press function key 8 (f8)

You score for each hit

Green Robots -	5 pts
Blue Robots -	10 pts
Red Robots -	15 pts
Black Robots -	35 pts

Bonus points for defeating all four roomfuls.

Extra life awarded at 1500 points.

Good Hunting!

This cassette contains four copies of this program, two on each side. If you have any loading problems, or if one of the copies gets damaged, then use one of the other copies. Before loading any program, please ensure that the heads of your cassette deck are clean and demagnetised.
